

Notes to Supplemental Video

1. The supplemental video provides more experiments and comparisons.
2. The video is in avi format.
3. The 2D marker videos of Sequence 1,2,3 are displayed at 2x the recorded speed.
4. Sequence 1 and 4 are performed by a handicapped person under clinical gait rehabilitation treatments.
5. In Sequence 4, if a frame is a failure frame, then all the markers are not shown in the frame for clear illustration purposes. In our paper, a failure frame is a frame with at least one unlabeled marker.
